BOOK SYNOPSIS

Over 5,000 illustrations of the latest imaging and research findings essential for effective diagnosis of retinal disorders populate this atlas. A unique page layout consisting of optimally positioned panoramic images, magnified photos, and histopathological specimens illustrate key manifestations, giving you the best visual display of each disease. In addition, composite images using different retinal imaging modalities, including the latest in optical coherence tomography (OCT), fluorescein angiography, indocyanine green (ICG), and fundus autofluorescence display how a disease appears in each imaging modality, allowing you to compare imaging methods and gain a better understanding of each disorder.
